CALCULATING TABLECLOTH SIZE

DROP LENGTHS

- A standard drop of 8" is recommended for all tables. That is the amount of fabric that will hang over each side of the table.
- Some operators might want a slightly shorter or longer drop. In most cases 6" is the shortest drop recommended. An 8" drop will let both fabric and vinyl tablecloths drape easily.

Basic Table Sizing

Square Or Rectangular Tables

Round Tables

Booth Tables

Conference Cloth

For any square, rectangular or round table, simply take the width of the tabletop, add your Drop to EACH Side and that's the size Tablecloth you need:

EXAMPLE for a 36" Square table:

| | | |
|----------------------------|---|------------------------------|
| 36" wide table | x | 36" wide table |
| +16" (8" drop x's 2 sides) | x | +16" x (8" drop x's 2 sides) |
| 52" wide cloth | x | 52" wide cloth |

or

EXAMPLE for a 60" round table:

| |
|--------------------|
| 60" round table |
| +16" (8" drop x 2) |
| 76" round cloth |

or

EXAMPLE for a 30" x 42" booth table:

| | | |
|----------------------------|---|--------------------|
| 30" wide table | x | 42" long table |
| +16" (8" drop x's 2 sides) | x | + 8" (drop 1 side) |
| 46" wide cloth | x | 50" long cloth |

Please specify Booth Set Up when ordering

Conference Cloths

Conference Cloths are used to cover Conference Tables. Similar to a Head Table at a banquet, they should have an 8" or 10" drop on the open side and 28" fall, almost to the floor, on the other sides. A typical 6' Conference Table:

| | | |
|----------------------------|---|---------------------------|
| 18" wide table | x | 72" long table |
| +38" (10" drop + 28" drop) | x | +56" (28" drop x 2 sides) |
| 56" wide cloth | x | 128" long cloth |

Table with radius corners

Square Or Rectangular Table OVERLAY

Round Table Overlay

Fitted Tablecloths For Odd Shaped Corners

Marko offers Hat Box Corner form fitted tablecloths that have a continuous seam around the top edge of the table. If the corner radius of your table is greater than 2" the shape of the corner will be used. If the corner radius is less than 2" the corner will be made square. Contact your customer service representative if you have any questions regarding what type of tablecloth will work for you.

Table Toppers

Table Toppers cover the top of Skirted Banquet Tables. They follow the same rules as any other rectangular, square, or round tablecloth. They need to be the exact length, width, or circumference of the table PLUS the desired drop length added to EVERY side. Use the formulas on page 76 and this page to calculate size.

For common applications where the Banquet Table is going to be skirted all the way around, we recommend the standard 8" drop. For Head Tables where one side of the table is going to be left open (Skirted 3-sides with returns on the corners of the 4th side), some people like a slightly longer drop of 10". You should be careful of drops over 10", as the cloth may end up resting partially in patrons' laps. A quick look at the chair seat heights in the room will help you avoid this problem.

Table Toppers are placed first with the Clips for fastening the Skirting placed over them to hold the Topper in place. For a finished look, always recommend Table Padding for Banquet Tables.

Overlays

Overlays are placed on top of the Tablecloth on a dining table for a more formal, elegant presentation. There are two types:

- Pointed Corners: Square cloths that are set at a 45° angle on the table for the corners to hang over the side of the table
- Second Tablecloths: Exact size and shape as the table top with a 3" drop added to all sides

Embrace

The Coldmaster Solution:

- High-impact ABS plastic holds up to foodservice use
- Exclusive refrigerant gel ensures high performance
Non-toxic gel receives a cold "charge" when frozen overnight, which enables it to keep your food cold throughout the day
- Extra insulation surrounds refrigerant gel for maximum cold retention
- Refrigerant gel is enclosed in a bag; prevents leaks, even if shell is damaged

Coldmaster line includes a full suite of **COLD RETENTION SOLUTIONS** such as 3 gallon ice-cream servers, condiment bars and industry firsts such as CoolCheck™ and Designer pans

- Exclusive refrigerant gel ensures **HIGH PERFORMANCE**
- NON-TOXIC** gel receives a cold "charge" when frozen overnight, which enables it to keep your food cold throughout the day
- Extra insulation surrounds refrigerant gel for **MAXIMUM COLD RETENTION**
- Refrigerant gel is enclosed in a bag; **PREVENTS LEAKS**, even if shell is damaged, ensures 100% coverage and helps keep it in place

VS.

Competitor

- Gel is not enclosed in a bag, less protection if there is a break
- Units must be stored upside down or food in the unit is not chilled at the top of the pan
- No additional insulation means that there is much less "chill time"
- Limited Assortment

The Essential Drink Mix System

1. Mix In One-Gallon Container

Accurately measure and mix concentrate or powder in gallon containers. Its wide mouth eliminates the need for a funnel.

2. Cut Preparation Time

Prepare mixes and juices in advance using the gallon storage container. At peak periods simply empty into a quart backup.

3. Transfer To Quarts

Pour a gallon of mix into four easy-to-handle quart containers.

CARLISLE
FOODSERVICE PRODUCTS

EFFICIENT
DURABLE
INNOVATIVE
SMART
**WARE-
WASHING
PRODUCTS**

Carlisle offers every rack, basket and accessory you need for efficient warewashing operations. OptiClean™ is the industry standard for enabling clean, spotless ware. Our full line of color-coded rack extenders and Plaque-a-Racks are the ideal solution for sorting and managing your ware.

OPTICLEAN™

Engineered to Flow

Warewashing can be labor intensive. If not well managed, it is likely to hurt your operation's bottom line and add unnecessary frustration. However, labor and efficiency is not the operator's only problem. The quality of your warewashing could directly affect your customers' health and the reputation of your establishment. If an effective system of cleaning and sanitation is not upheld, you may be facing risks on a daily basis that could jeopardize the future of your business.

3-Component System

Base Rack // Open Extender // Divided Extender

By alternating open and divided extenders, each level of the rack offers efficient flow through of water for superior performance and thick divided walls for protection

Double-wall Construction

Maximum strength, protects contents from moving machine parts

Versatile Stacking

Stacking from either direction and with all major competitors

Open Wall Design

Open profile facilitates superior washing, complete rinsing and fast drying

Quick Draining

No flat surfaces to trap water or loose food particles within the rack—ensuring rapid drying

4-way Tracking

Easy dish machine loading from any side without the need to rotate racks

Locking Extenders

Unique snap-on design allows for fast, simple assembly

Comfort Curve Handles

Comfort Curve Handles—molded into all four sides for easy handling, won't pinch fingers

All OptiClean Racks have an outside measurement of 19.75" x 19.75"

The Honeycomb

We've developed the most highly engineered warewashing solutions to improve your establishment's operational efficiency. Carlisle utilizes a tested geometric honeycomb structure, admired and studied since ancient times. The honeycomb design delivers unmatched durability while simultaneously increasing the flow of water through each rack. The open honeycomb design also eliminates flat surfaces and corners that would otherwise harbor food particles allowing water to drain and contents to dry quickly.

NeWave™

In pursuit of an even more efficient foodservice operation, we developed the OptiClean NeWave glass rack. These rounded wave design racks hold 20% more glasses than equivalent, square-compartment racks. This means more glasses in less racks, reduced chemical and/or water usage and improved labor efficiency. NeWave also holds glasses securely in place, resulting in minimal movement and reduced breakage.

Easy Identification

Water is not the only aspect we engineered to flow. A color-coded system allows operators to choose their own method of identification to categorize by the type of glass, location of wares within the facility or even specific types of events. This color-coded system allows your operation to flow smoothly and eliminate unnecessary confusion for both existing and new employees.

Textured Finish

Non-slip textured finish on outside walls reduces scratches to keep racks looking new, improve durability and provide a secure grip

WET MOPPING GUIDE

Use the guide below to help choose the right products for your floor care needs.

General Mopping

Choose mops with high absorbency, release and durability. If laundering facilities are available, it is beneficial to take advantage of launderable mops to save money. For performance and durability choose a synthetic blend or rayon mop with looped end and woven tailbands.

Yarn

- It is important to choose the right mop in order to get maximum efficiency
- Some yarns naturally perform specific cleaning tasks better than others

Yarn Ply

- Yarn ply is the number of strands twisted together to make a single yarn strand
- Although more plies give added strength, it does not always mean higher quality yarn
- More strands can add durability, but they decrease absorbency
- It is better & more cost effective to choose a higher quality yarn than a high ply, low-quality yarn

Twist

- The “twist” of a yarn is a result of how tightly the fiber strands are wound together
- A tightly twisted yarn might have more strength & last longer, but it can have less absorbency
- The best choice is determined by the type & quality of the yarn, as well as the mop’s construction
- Mops with looped-end construction allow the yarn to have a loose twist without the fraying

Finish Mopping

For finish mopping applications look for a rayon or synthetic mop. These mops offer high absorbency and release. To make sure you are achieving maximum floor coverage with minimal streaking choose a tailband and looped end yarn.

| | Advantages | Disadvantages | Use |
|-------------------------------|--|--|--|
| Cotton | Good absorption & retention with limited shrinkage & a low initial cost. | Break-in period required. Slow drying yarn leads to mildew & deterioration. Lints. | Designed for general use. Scrubbing & cleaning up liquids. |
| Synthetic | Long stable fiber offers excellent tensile strength without linting. | Higher cost. Poor absorption. | Rough surfaces. |
| Cotton Synthetic Blend | Excellent choice for performance, price & durability. Synthetic fiber offers durability & color options. | Possible shrinkage. | Requested by professionals who require a better, longer lasting mop. |
| Rayon | Absorbs quickly with easy release. Dries fast & is mildew resistant. Cleaner yarn with less linting. | Shrinks when laundered and has less liquid retention. | Use for applying liquids such as disinfectant or floor finishes. |

WET MOPPING GUIDE

Use the guide below to help choose the right products for your floor care needs.

Cut-End Or Looped-End

Cut-End

- Cut-end mops are the most popular
- Low purchase price compared to looped end
- Cannot be laundered
- Cover less area per pass when mopping

Looped-End

- Superior performance and lasts longer than cut-end mops
- Launderable
- Tailband style gives better mopping coverage
- Looped-ends prevent fraying and unraveling so you can achieve reduced labor costs and replace mops less often
- Although the initial investment is more than a cut-end style, the life expectancy makes looped-end mops a more economical choice

How We Rate Our Mops

Absorbency

The absorbency of a mop refers to the ability to pick up and retain liquid. Higher levels allow faster floor drying times, leading to greater productivity and safety. Rayon and cotton yarns have the highest absorbency.

Durability

Mop durability is a measure of how long it will last or perform before needing replacement. Synthetic and blended mops are the most durable.

Release/Retention

Release is the ability of a mop to disperse liquid onto the floor or during wringing. Higher levels allow faster and more complete wringing, as well as more efficient application of cleaning solutions on the floor.

Launderability

The launderability is based on the number of washing cycles it can withstand before the construction of the mop is degraded. Synthetic and blended fiber mops have the highest levels of launderability.
