

Smart Universal Lid

Norpro Item #627

Using the Smart Universal Lid

For most types of cooking, leave the steam vent knob in the “Auto” position. This will trap the steam when appropriate, allowing the food to baste itself. If the contents reach a boiling temperature, the Smart Universal Lid valve will automatically open to release steam and prevent a spillover.

If you prefer to baste for a long period of time, simply slide the lever to the “Off” position. This will stop the automatic valve from opening.

Rice and Pasta Boiling

Please keep the vent set to auto when boiling rice and pasta. The high starch content in rice and pasta causes quick boil-overs; therefore, you may need to monitor the lid more closely when cooking rice and pasta.
